GENERAL INFORMATION

POWER P

- $\mathsf{P}_1 * n = \mathsf{P}_2$
- $P_1 = Input power$
- $P_2 = Output power$
- n = Transmission efficiency

VELOCITA' DI ROTAZIONE n

 $n_1 = Input speed$

 $n_2 = Output speed$

An output speed \leq 1400 rpm is suggested so as to optimize the working condition and extend the service life.

TRANSMISSION RATIO i

 $i = \frac{n_1}{n_2}$

TORQUE T

$$T_{2} = \frac{9550 \cdot P_{1} \cdot n}{n_{2}} \left[Nm \right] \qquad \qquad T_{2n} \geq T_{2} \cdot f_{s} \left[Nm \right]$$

- $T_2 = Output torque$ $T_3 = Rated output torque$
- T_{2n} = Rated output torque P₁ = Input power
- n = Transmission efficiency
- $f_s = Service factor$

The radial loads is proportional to the requested torque and inversely proportional to the transmission member diameter following this formula.

$$F_{R} = \frac{2000 \cdot T \cdot T.e.f.}{D} \left[\begin{array}{c} N \end{array} \right]$$

 $\begin{array}{ll} F_{R} &= Radial \mbox{ load} \\ T &= Nm \mbox{ (Torque)} \\ T.e.f. &= Transmission \mbox{ element factor} \\ T.e.f. &= 1,15 \mbox{ gear} \\ &= 1,4 \mbox{ chain spocket} \\ &= 1,75 \mbox{ v-pulley} \\ &= 2,5 \mbox{ flat-pulley} \\ D &= Transmission \mbox{ element diameter} \end{array}$

When the radial loads is not applied on the centre line of the shaft it is necessary to use the following formula.

$$F_{Rx} \leq \frac{F_{R} \cdot a}{(b+x)} \left[\begin{array}{c} N \end{array} \right]$$

 F_R = Radial load on the centre line a,b,x = see tables page 9-46-47-77-78

LUBRICATION

All, gearboxes and variators are supplied, CHA type excluded, complete with lubricant. The gearboxes maintenance free are lubricated with synthetic oil the others with mineral oil. It is very important to verify the mounting position because sometimes adding some oil is enough, in other case to lubricate bearings with special grease would be necessary. Use only recommended oils.

Warning in case of heavy work it is better to install, where possible, breather plug.

PAINTING

All the gearboxes and electrical motors are painted Grey RAL 9022 with epoxy resins powder. Big gearboxes and motors are cast iron made, aluminium all the others.

The service factor mainly depends on three parameters:

- type to load: U M H
- run time: h/day
- start-up frequency: na/h

U = uniform M = moderate H = heavy na/h= starts/hour

| 24 h | 16 h | 8 h | | Hou | rs/day | | | | | | |
|-------|-------|-------|------------------|-------------|--------|----|----|-----|-----|-----|------------|
| | | | | | | | | | | | H |

LOAD TYPE - APPLICATION

- U Conveyor belts for light weights centrifugal pumps lifts bottling machines
- M Conveyor belts for heavy weights packing machines wood working machines gear pumps
- H Mixers bucket elevators tooling machines machinery for bricks vibrators

V6/B8 MOUNTING POSITION

When the worm gearboxes mounting position is V6 or B8, with continuous work or input speed >1400 p.p.m, it is necessary to call our technical service.
